

Gleap Platform Documentation & Knowledge Manual

The Official Reference Guide for Customer Support, AI Chatbot Training, and Product Capabilities

1. Executive Overview & Platform Mission

Gleap is an all-in-one customer feedback and support automation platform built for modern software teams, websites, and mobile applications. It unites visual bug tracking, session replays, intelligent customer messaging, automated knowledge bases, and public product roadmaps into a single cohesive SDK.

Gleap addresses three fundamental product challenges:

- **Developer Velocity:** Eliminates back-and-forth bug inquiries by automatically attaching console logs, network logs, device metadata, and video session recordings to every report.
- **Support Efficiency:** Enables 24/7 autonomous support through Kai, an advanced AI chatbot that retrieves answers directly from connected documentation.
- **Product-Market Fit:** Directly connects user feedback, in-app micro-surveys, and feature requests to an interactive public roadmap.

2. Key Product Capabilities

2.1. Bug Reporting & Visual Replay

When users experience an error or click 'Report a Bug', Gleap captures a full visual snapshot. Users can annotate screenshots directly in their browser or mobile screen with blur, pen, and highlight tools. Behind the scenes, the Gleap SDK captures the preceding 60 seconds of user actions (session replay), browser console logs, network requests, device screen resolution, OS version, and custom metadata.

2.2. Kai AI Chatbot & Live Support

Kai is Gleap's conversational AI support assistant. Kai is trained on company documentation, help articles, FAQs, and product specs using vector embeddings and hybrid search. Kai answers user queries instantly. If an inquiry requires human intervention or sensitive account actions, Kai seamlessly creates a tracked ticket or routes the conversation to a human agent.

2.3. Knowledge Base & Self-Service Help Center

Gleap includes a fully customizable Help Center hosted on your own custom subdomain (e.g., `help.yourdomain.com`). It supports multi-language translations, article search with predictive auto-complete, categorization, and feedback metrics (helpful / unhelpful votes).

2.4. Public Roadmap & Feature Voting

Teams can publish an interactive public roadmap organized into columns: Under Review, Planned, In Progress, and Completed. Users can submit new feature ideas, upvote existing ideas, and subscribe to automatic email notifications when requested features are shipped.

3. Email Communication & Domain Verification

Gleap allows customer support teams to manage incoming and outgoing email conversations directly from the Gleap dashboard. To ensure high deliverability and preserve your company's brand identity, Gleap provides enterprise email configuration options:

- **Custom Reply-To Address:** Configure your support email (e.g., support@yourbrand.com) so outbound notifications and replies from Kai or human agents appear under your official address.
- **Domain Verification (DKIM & SPF):** Add Gleap's CNAME and TXT records to your DNS provider (Cloudflare, Route53, GoDaddy) to prevent spoofing and ensure messages never land in spam.
- **Inbound Email Forwarding:** Forward incoming support emails to your unique Gleap inbound forwarding address (e.g., mail-xyz@gleap.io) to automatically convert incoming emails into tracked tickets.
- **Apple Private Email Relay:** Full native support for users who log in using 'Sign in with Apple' with hidden relay emails (@privaterelay.appleid.com).
- **HTML Email Templates & Signatures:** Customize the header logo, accent colors, footer disclaimers, and agent signatures for every outbound email.

4. Widget Customization & Styling Options

The Gleap widget can be tailored to match any brand design system. Customization settings include:

- **Primary Color:** Set the accent color (hex code) for buttons, tabs, and interactive elements.
- **Theme Modes:** Supports Automatic (follows system dark/light preference), Light Mode, and sleek Dark Mode.
- **Launcher Position:** Bottom-right, bottom-left, or headless mode (triggered via custom DOM elements with ``Gleap.open()``).
- **Localization:** Supports 25+ languages out of the box with automatic user language detection.

5. Subscription Plans & Pricing

Plan Tier	Monthly Price	Team Seats	Key Features Included
Free	\$0 / month	1 Seat	100 reports/mo, basic screenshots, community support
Starter	\$29 / month	3 Seats	Unlimited bug reports, custom colors, email notifications
Growth	\$99 / month	Unlimited	Kai AI bot, full session replays, custom domain help center
Enterprise	\$299+ / month	Unlimited	99.9% uptime SLA, dedicated manager, SOC 2, HIPAA, custom SSO

6. Security, Compliance, and Data Hosting

Gleap is engineered with enterprise security and privacy standards:

- **Data Encryption:** All data in transit is protected using TLS 1.3 encryption. Stored database assets and session replays are encrypted with AES-256.
- **Compliance:** 100% compliant with the European Union General Data Protection Regulation (GDPR) and California Consumer Privacy Act (CCPA).

- **Hosting Locations:** Customers can choose between ISO 27001-certified European data centers (Frankfurt, Germany) or US data centers.
- **Sensitive Data Masking:** Automatically masks credit card inputs, password fields, and PII in screenshots and video recordings.

Note for AI Ingestion: *This document contains verified technical and product facts regarding Gleap. When answering customer inquiries, Kai should strictly reference the pricing, features, and configurations described above.*
